

1. Paid membership, how to implement and if the user pays online he will be able to sign in automatically or a username and pass will be provided manually and if there is a plugin can we have it to see how it works and implement it 
2. Which of the menu items will have different content, let's consider the default will be wordpress posts and identify the rest and the current menu has a dropdown on the first item news (has a subs, Armenia artaskh and middle east those are obvious posts), what about the top level menu are all posts categories or there are some unique items, And which articles will be paid, can you give a list? 
3. Rss fee, just the title of the news?? And where to show this results. Keep in mind we can't rely on graphic since we can't know if the source is providing any 
4. Content editing the news and stuff how flexible should be, in the design Jiro has a section which has an inserted add in 2 columns, do we need to create flexible content editor to create columns and rows as they wish or install a visual editor that we bought 
5. Dose the menu changes based on the language that is selected, and can give us clear structure of the menu with items if possible, because we are trying to decide how to implement all of the menu items 
6. On the point HWWR-3 on inner point 3 can you elaborate more on "capability for enhanced features & special editions" or this will provided by the plugin? 
7. On the point HWWR-4 do we need the plugin "Pods framework", I don't see the need of it!! And can we have all the plugins that we are gonna use, the paypal and the RSS or you can tell us more about the RSS and then see if we need one. 
8. Do we have the mobile app plugin so we can try to install it and do some testing, and see how it's responding to our code 
9. Who's going to do the migration of the content, can luso help us on this one, we can do the manual editing stuff, if she can't then I will have to find a way. 

Thanks
